Dear Sowelo Consulting hiring team,

I am applying for the Full Stack Developer role. My work centers on building web products across React and Next.js frontends, Node.js and NestJS services, REST APIs, and MongoDB/PostgreSQL data layers.

The role aligns particularly well with my experience in JavaScript, TypeScript, React. I currently contribute to a multi-vendor e-commerce product while respecting strict confidentiality, and my selected work includes EV operations dashboards, real-time collaboration, social communication, job matching, and role-based course management.

Before software, I designed architectural and mosaic patterns in CAD. That background shaped how I approach interfaces and systems: understand the structure, make each relationship intentional, and verify that the final result works at both detail and product level. I also use Codex, Claude, Cursor, and GLM as development accelerators while retaining responsibility for review, correctness, and maintainability.

I would welcome a conversation about how this combination could contribute to Sowelo Consulting. Thank you for reviewing my application.
